

**THE INFLUENCE OF PROJECT BASED LEARNING FOR STUDENT
LEARNING OUTCOMES
(Quasi Experimental Research in Class V SDN 223 Bhakti Winaya Bandung)**

ABSTRACT

This study aims to determine the effect of the project based learning model on student learning outcomes on theme 1 of the animal and human motion organs of subtheme 3 environment and its benefits. This research was conducted at SDN 223 Bhakti Winaya Bandung Academic Year 2019/2020. The research method used in this study is a quasi-experimental research design with a non-equivalent control group design. The population in this study were all students of class V SDN 223 Bhakti Winaya Bandung with 96 students, while the sample in this study were 62 students, namely VB class with 31 students as control class and VC class with 31 students as students experimental class obtained by simple random sampling technique or randomly selecting samples in class V students. The instrument used was a student learning outcomes test consisting of 15 items with multiple choice forms. Data analysis techniques used in this study were normality test, homogeneity test, t test, gain test and effect size test. Based on the results of the hypothesis test (t) obtained significant data $t_{obtained} < t_{table}$ that is $0.01 < 0.05$ then H_0 is rejected and H_1 is accepted, which means that there is an influence of the project based learning model on student learning outcomes.

Keywords: Project Based Learning Model, Learning Outcomes.
